

Security Management System

OAM

OAM is an experienced provider of practical, hands on security risk management consultancy advice to resource sector companies in developing regions throughout the world.

To support the security needs of these environments OAM implements an outsourced Security Management System to protect the asset over the long term. The component parts of which may include any of the following:

- Provision of Experienced Site Based Security Management Personnel
- Conduct of a detailed Audit to establish the effectiveness of the existing security system in relation to the threat profile and risk environment for the company and operation
- Development of a Security Management Plan that identifies solutions to reduce the threat and protect the asset
- Implementation of effective Standard Operating Procedures
- On site Skills enhancement and Training to quality assure existing or new security forces

Threats, Risk and Reward in Developing Countries

Commercial Resource sector operations in developing countries are faced with a range of safety and security issues, with management only too aware of the impact on personnel, assets and the effect on the overall feasibility of mine operations.

These issues have been exacerbated by the global political and economic challenges that have manifested themselves throughout developing countries in the last few years, but in particular following the terrorist attacks on the USA of September 11, 2001.

OAM can assist to develop the plan and implement the system to secure your internal environment and ensure that your external environment is not headline material.

Problems

The OAM SMS is designed to produce outcomes that reduce the range of threats that often create significant safety and security problems for company operations including:

- Existing security forces that are performing poorly or lack skill capabilities
- Fraud and theft of assets from site and personnel
- Interference with mining operations
- Threats and Intimidation to your staff and their families
- Equipment damage
- Mine operation product Loss

OAM Credentials

OAM has an excellent reputation, extensive experience and importantly a successful track record in managing outsourced Security Management Systems over the long-term.

The OAM capabilities provide practical, hands on solutions and problem solving capabilities that work in difficult environments. This track record has been established in a variety of environments including in Indonesia during the economic and geo-political downturn since 1998.

The credentials OAM consultants bring to the task include:

- Extensive experience in South East Asia, South Pacific and Africa
- Strong safety and security management pedigrees (usually Special Forces military experience) with professionally accredited qualifications and a proven commercial track record
- Strong understanding of the cultural aspects that must be managed in the particular environment
- Strategic and tactical level management skills and experience
- Linguistic capabilities

- World-class training and skills transfer credentials in training and improving national guard force capabilities

Security Management System - (SMS)

The OAM security management system (SMS) offers a "hands on" practical approach to outsourcing the responsibility for the ongoing management of a company's security requirements.

The SMS is a combination of any of the following that can be implemented individually or in entirety:

- Provision of on site expert Security Management Personnel who are responsible for the oversight, implementation and coordination of all elements of the SMS. The strengths and capabilities of the OAM personnel include provision of:
 - Expert advice on individual or organisational security and emergency needs
 - Emergency management planning, coordination, training, and briefings
 - Effective guard force operations
 - Problem solving in fluid operational environments
 - Skills enhancement and training
 - Liaison and communication with all regional and local security forces
 - Daily information feedback to management on security issues
- A detailed Audit of the corporate situation to establish the risk and threat profile of the organisation and operation
- Development of a Security Management Plan to solve problems, reduce risk and mitigate all threats
- A documented system of practical Standard Operating Procedures developed and proven at a range of operational sites in developing regions throughout South East Asia and Africa
- The SMS can be applied to an existing security operation whether it is outsourced or company employees to provide quality assurance or skills enhancement to ensure best practice.

Quality

An OAM SMS is world's best practice and follows the principles of AS/NZ 4360:1999 - Risk Management standard to provide a comprehensive overall security management system for maintaining the operational viability and safety of the assets and personnel involved in the particular project.

Rewards

- A successfully managed SMS brings a number of clear rewards;
- Maintenance of operational viability
 - Increased performance capabilities of employed security force

- Corporate diligence by maintaining an appropriate management system for safety and security issues
- Enhanced financial return from reduction of losses

Benefits of OAM Security Management System

The key benefit from an OAM SMS is the ability to outsource responsibility for the security management requirements of operations to experienced, highly capable and effective management personnel.

OAM has expertise in providing advice, support and problem solving skills that are focussed on the resource sector with its unique problems and demands. The OAM principals have excellent safety and security pedigrees and are operationally involved and available at all times.

OAM currently manages a number of SMS contracts globally with references available if required. The other benefits include:

- Responsive contingency support
- World class professional contract management by a well established regionally based company
- Flexible consultant personnel options based on suitability for varied tasks
- Variety of roster options to provide 24 hr - 365 day security management coverage at site
- Long term contractual support capability based on an extensive portfolio of trained and experienced consultants
- Fully accredited and structured business operation with all required professional insurance coverage
